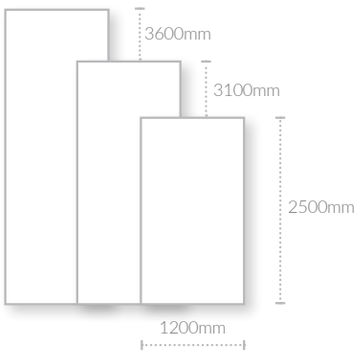
concrete skin

glass reinforced concrete (GRC) panels

Developed by Rieder, concrete skin GRC flat panels are the only lightweight concrete panels available in the UK. With a thickness of 13mm they are the thinnest GRC concrete panels, enabling faster installation with less lifting equipment than traditional GRC.

Traditional GRC products are thick, heavy and can be challenging to install. Pura Facades exclusively supply the UK market with 13mm GRC panels - falling in-line with standard ventilated facade panels and their fixing systems. The two layers of glass mesh fibres running through the concrete panel creates a dense but thin lightweight panel.

Sizes*



*Length can be extended up to 4.5m
