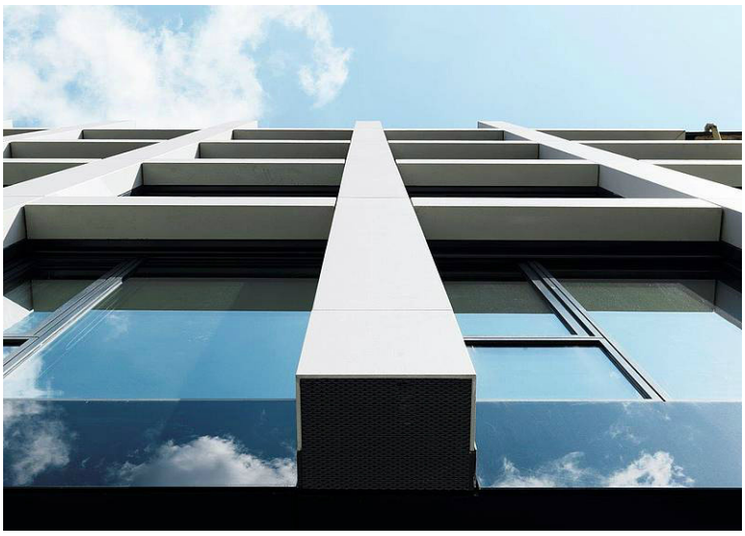
formparts

glass reinforced concrete (GRC) folded panels



Developed by Rieder, formparts are glassfibre reinforced concrete (GRC) folded panels that can be moulded or shaped to create 3D elements, creating a striking look to any facade.

This through-coloured concrete is unique in its ability to be moulded and shaped from a single piece, whilst maintaining a thickness of only 13mm and weight of 30kg per square metre. Each lightweight concrete flat panel can be formed in U-shapes or C-shapes for vertical fins or spandrel panels. Other popular GRC folded panels we offer are arches, corner pieces, window corner side jambs or sloping window sills – often designed in conjunction with flat panels across the facade.

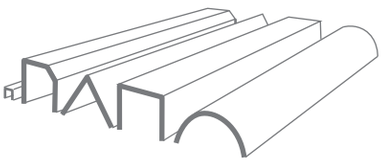
Colours**

Shapes



*For projects over 1000 m^2, an additional length of 4500mm is available.

**Colours shown are indicative of the shades available, please request a sample for an accurate colour reference. Other colours are available, contact us today for information on the full colour range.

RIEDER

Combining the simplicity of concrete with continual innovation, The Rieder Group strive to continually inspire by extending the limits of concrete to support architectural design. Pura Facades exclusively fabricate and supply Rieder concrete skin, öko skin, formparts and cast. Contact Pura Facades for more information.
